1 Introduction to this Book **5**
- 1.1 What is the premise of this book series? . . . 5
- 1.2 What is the premise of this book as related to calculus? . . . 5
- 1.3 Why did the author choose to write this book about calculus? . . . 5
- 1.4 How does the author of this book intend this book to be used? . . . 5
- 1.5 How does the author of this book suggest a reader use this book? . . . 5

2 Introduction to Calculus **7**
- 2.1 What is calculus? . . . 7
- 2.2 What are the topics in calculus? . . . 7
- 2.3 Why are these topics of calculus studied? . . . 7
- 2.4 How is calculus usually taught? . . . 7
- 2.5 How should calculus be taught? . . . 7
- 2.6 How should I learn calculus? . . . 7
- 2.7 What is the best way for me to approach the study of calculus? . . . 7
- 2.8 How should I use this companion text alongside my study of calculus? . . . 7

3 Limits **9**
- 3.1 Motivation . . . 10
  - 3.1.1 What is the motivation for the concept of a limit? . . . 10
  - 3.1.2 Why are we learning about limits? . . . 10
- 3.2 History . . . 10
  - 3.2.1 What is the historical context of the concept of the limit? . . . 10
- 3.3 Intuition . . . 10
  - 3.3.1 What is the intuitive understanding of a limit? . . . 10
- 3.4 Significance . . . 10
  - 3.4.1 Which parts of the study of a limit should I understand as part of a necessary foundation for calculus? . . . 10
- 3.5 Theory . . . 10
- 3.6 Formalism . . . 10
  - 3.6.1 What is the motivation for the formal definition of a limit? . . . 10
- 3.7 Computation . . . 10
  - 3.7.1 What are common computational methods for limits? . . . 10
- 3.8 Reuse . . . 10
  - 3.8.1 How will the concept of a limit be reused later? . . . 10
  - 3.8.2 Which specific parts of the study of limits should I keep in mind for the future? . . . 10
  - 3.8.3 Which computational methods for limits should I pay specific attention to in order to reuse later? . . . 10

Chapter 1

Introduction to this Book

1.1 What is the premise of this book series?

1.2 What is the premise of this book as related to calculus?

1.3 Why did the author choose to write this book about calculus?

1.4 How does the author of this book intend this book to be used?

1.5 How does the author of this book suggest a reader use this book?

Chapter 2

Introduction to Calculus

2.1 What is calculus?

2.2 What are the topics in calculus?

2.3 Why are these topics of calculus studied?

2.4 How is calculus usually taught?

2.5 How should calculus be taught?

2.6 How should I learn calculus?

2.7 What is the best way for me to approach the study of calculus?

2.8 How should I use this companion text alongside my study of calculus?

Chapter 3

Limits

3.1 History

3.1.1 What is the historical context of the concept of the limit?

3.2 Motivation

3.2.1 What is the motivation for the concept of a limit?

3.2.2 Why am I learning about limits?

3.3 Intuition

3.3.1 What is the intuitive understanding of a limit?

3.4 Significance

3.4.1 Which parts of the study of a limit should I understand as part of a necessary foundation for calculus?

3.5 Formalism

3.5.1 What is the motivation for the formal definition of a limit?

3.6 Computation

3.6.1 What are common computational methods for limits?

3.7 Reuse

3.7.1 How will the concept of a limit be reused later?

3.7.2 Which specific parts of the study of limits should I keep in mind for the future?

3.7.3 Which computational methods for limits should I pay specific attention to in order to reuse later?
